

## Towards Building Recursive and Complete Discourse Structures of UD/PARSEME corpus

Iskandar KESKES, Assistant professor

Faculty of Economics and Management, University of Sfax (Tunisia)

### Objectifs :

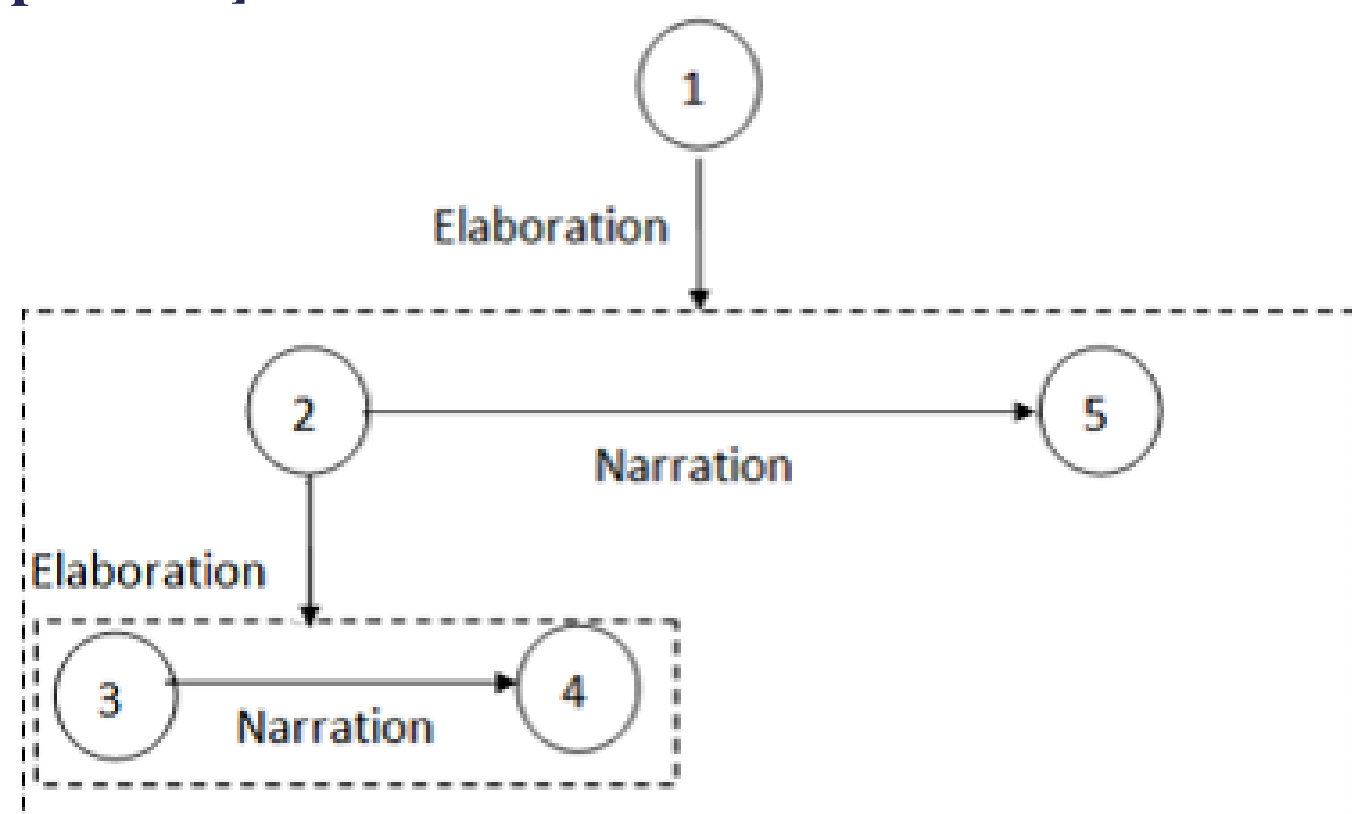

- Construct recursive and comprehensive discourse structures for the UD/PARSEME corpus.
- Create a new hierarchy of relations, basing on previous SDRT

### Steps :

- ✓ Documents are segmented into elementary discourse units.
- ✓ These units are linked by discourse relations to form complex discourse units.
- ✓ These complex units, in turn, may be interconnected via discourse relations to other discourse units

### Example :

(1) [John had a great evening last night.] 1 [He had a great meal.] 2 [He ate salmon.]  
3 [He devoured lots of cheese.] 4 [He then won a dancing competition.] 5
