# **IDION: VMWE documenting web-environment addressed to human user and NLP.**

## **Application to Greek and Pomak VMWEs**

**Stella Markantonatou, Kyriaki Salveridou, Antonios Balas, Nicolaos Valeontis, Dimitris Karamatskos, George Pavlidis**

*Relevant UniDive Working Group: **WG2***

IDION is the effort of many volunteers over the last 10 years. A recent national funding supported a major upgrading of the database and the development of the user interface; it is through the later that we attempt to present IDION to you.

Resources are costly and life is short, so we have tried to provide rich, useful and usable information for both the human user and for NLP. IDION contents are freely available. The environment is also available to researchers of any language.

It goes without saying that we have developed some views on irritating things such as “the lemma of a VMWE”, “variant”, “flexibility”, name it... **Frankly, we are still full of questions on all issues.**

**YOU ARE WELCOME TO SEE IDION AND ARGUE ABOUT EVERYTHING  
WE NEED YOUR IDEAS**
